### **DETAILED ACTION**

The examiner notes the receipt of the amendments and remarks received in the office on 10/26/2009. Claims 17-23 have been cancelled. Claim 1 has been amended. Claims 1-16 are free of prior art and are ready for allowance.

### **Application Priority**

This application claims the benefit of pending U.S. Provisional Patent Application Serial No. 60/428,811 filed on November 22, 2002.

### **REASONS FOR ALLOWANCE**

The rejection of claims 1-3, 11-16 under 35 U.S.C. 112, first paragraph is withdrawn due to Applicants' amendment of claim 1 to limit the estrogen receptor agonist compounds.

The following is an examiner's statement of reasons for allowance:

Claims 1-16 are drawn to a method for reducing vascular hyperreactivity in vascular muscle cells comprising exposing the vascular muscle cells to an effective amount of a selective estrogen beta receptor agonist that is selected from the group consisting of 5  $\alpha$ -androstane-3  $\beta$ -diol, a derivative of 5  $\alpha$ -androstane-3  $\beta$ -diol that has estrogen beta receptor agonist activity, epiestriol and diarylpropionitrile. The enablement rejection is withdrawn because Applicants' have limited the estrogen receptor agonists to 5  $\alpha$ -androstane-3  $\beta$ -diol, a derivative of 5  $\alpha$ -androstane-3  $\beta$ -diol that has estrogen beta receptor agonist activity, epiestriol and diarylpropionitrile. Applicants have provided guidance in the specification to a method of reducing vascular hyperreactivity in vascular smooth muscle cells by (1) comparison of effects of estriol

Art Unit: 1627

with  $3\beta$ Adiol and epiestriol in vitro on  $Ca^{2+}$  responses in rhesus coronary VMC (example 9) (2) estriol in a method of treating vasospasm and effect of estriol on diameter of coronary arteries (examples 3 and 4) and comparison of different estrogen beta receptor agonists (genistein, DPN) 3) in measurement of estrogen receptor beta activity. Also, the specification provides example for comparison of effects of estriol with  $3\beta$ Adiol and epiestriol in vitro on  $Ca^{2+}$  responses in rhesus coronary VMC, to a method of treating vasospasm by administration of the drug epiestriol and its effect on diameter of coronary arteries. Accordingly, the method is enabled for the compounds claimed in claim 1. The closest prior art of record are Hermsmeyer, WO 98137897 and Beaumont, Clin. Exp. Immunol., 24:455-463 (1976). Hermsmeyer teaches a method of treating coronary artery vasospasm, using progesterone and preventing cardiovascular disorder including stroke, peripheral artery vascular disease etc. Beaumont teaches estriol and progesterone as steroids. Applicants' by the way of a scientific article have showed that progesterone and estrogens, such as estriol, are not equivalent steroids and that progesterone is not an estrogen receptor binding ligand. Accordingly, the prior art does not suggest or teach estrogen beta receptor agonist such as estriol in a method of reducing vascular hyperreactivity in vascular muscle cells. The claims are allowable over the closest art of record because they do not teach or disclose the claimed method for reducing vascular hyperreactivity in vascular muscle cells comprising exposing the vascular muscle cells to an effective amount of a selective estrogen beta receptor agonist that is selected from the group consisting of  $5\alpha$ -androstane- $3\beta$ -diol, a

derivative of 5  $\alpha$ -androsterone-3  $\beta$ -diol that has estrogen beta receptor agonist activity, epiestriol and diarylpropionitrile.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
